

STATEMENT OF PURPOSE

RS19955

The requirement that an apprentice electrician be employed and enrolled in a course of instruction in order for his registration to be valid is difficult for apprentice electricians to comply with and for the Division of Building Safety to enforce in these economic times. The proposed legislation would provide the Board with more specific authority to subsequently address that situation, along with other registration renewal criteria that it has determined to be appropriate given that apprentice registrations are now effective for five (5)-year periods.

FISCAL NOTE

None.
